

Introducing a new Mycoplasma Testing Service

This test replaces the former Mycoplasma Testing from our Cell Center Division

Is your lab accepting cell cultures from an outside lab? Think again!

The mycoplasma contamination rate of continuous cell cultures varies between 15 and 30% in the United States.

Are you ready for that experiment with those cultured cells? Think again!

Chronic mycoplasma contamination ultimately impacts all cellular functions.

Ready to inject those cultured cells? Think again!

Some species of mycoplasma can cause immunomodulation, respiratory illness and mortality in laboratory animals.

The IACUC considers mycoplasma an adventitious pathogen that should not be injected into rodents.

Ready to publish those results? Think again!

Can you report that "All cell lines were routinely tested for Mycoplasma infection."?

Don't get caught! Have you cultures tested for Mycoplasma!

This service utilizes the MycoDTect[®] technology kit which features:

- * A high sensitivity
- * Universal detection of all mycoplasma
- * Species specific detection for 9 of the most common species

Special Introductory Pricing

Effective Jan 1, 2010 thru Feb. 28, 2010

1-10 Samples.....	\$72.00/sample
Groups of 11 Samples....	\$45.00/sample
Samples 12 -21.....	\$45.00/sample for first 11, \$72.00/sample for #12-21
